

● Rheo: Real-Time Energy. Tokenised. Reinvestable.

🔥 What We're Building

Rheo is a Decentralised Physical Infrastructure Network (DePIN) + Decentralised Autonomous Organisation (DAO) investment system that turns real-world energy data into tokenised, stable-value assets — enabling supply chains, data centres, and industries to unlock **cost-efficient resilience** in volatile, tariff-heavy markets.

We authenticate energy-backed Real World Assets (RWAs), using real-time smart data and on-chain protocols — enterprise-grade, community-driven.

Outcome	Description
Programmable Infrastructure	Creating a resilient technical foundation through programmability and automation
Capital Flows	Facilitating cross-border investment and liquidity with energy
Asset Tokenisation	Enabling verifiable digital representations of energy assets
Futures Markets	Establishing trading mechanisms and liquidity for energy futures

🧠 Why Now

- 🌐 *Tariff tensions + energy insecurity* are reshaping global supply chains.
 - ⚡ *Compute demand* from AI + Web3 is skyrocketing — and power is the bottleneck.
 - 🏠 *Tokenised infrastructure* is still under-leveraged in energy and logistics.
 - 🏛️ *RWA + DePIN* narratives are gaining momentum with investors and regulators.
-

What Makes Rheo Different

- **Stable Energy Asset:** Pegged to real-time energy input — not speculation.
 - **Enterprise-Ready:** Designed for supply chain offsets, brown-to-green transitions, and compliance.
 - **DAO-Driven:** Revenues reinvest into infrastructure, governed transparently via smart contracts.
 - **Plug-In Protocol:** Interoperable with smart estates, green IoT, and cross-currencies flow.
-

Current Needs

We're inviting aligned investors and partners to co-build the infrastructure of tomorrow's energy-backed economy:

-  **Architecture Layer**
Validator network, DAO design, and the foundational trading infrastructure for energy assets.
-  **Analytics Layer**
AI-driven trading intelligence, smart meter data parsing, and energy-to-token mapping.
-  **Ecosystem Layer**
Grid infra partners, Layer 1 chains, and cross-chain bridge providers.
-  **Capital:** Target up to \$10M (Early-Phase)

To build: Verification Protocol and Asset Investment Infrastructure

- 40% Tech & Product
 - 30% Market & Infra Ops
 - 20% Talent & Compliance
 - 10% Strategic Partnerships
-

Traction / In Motion

- 2 Significant Intellectual Properties (IPs): Proof of Energy Tokenisation (PoET) & Proof of Existence (PoE) ->  **Verification Layer for Asset Tokenisation**
 - Pilot discussions with regional energy related organisations
 - Advisor bench includes enterprise blockchain experts
 - Web2 & Regulator engagement (green infrastructure focus)
-

Let's Connect

- ♦ Back RWA or DePIN with real-world utility and traction
- ♦ See the convergence of energy, compute, and capital as a next-gen opportunity
- ♦ Build or support token engineering and composable, stable infrastructure
